Satkhira, Khulna, Bangladesh

SKILLS

- Frontend : React.js, Next.js, Tailwind CSS, Bootstrap
- Frontend Architecture : Component Design, State Management, Routing, Forms & Validation
- Frontend Performance : Lazy Loading, Efficient Rendering, Large Dataset Handling, API Integration
- Backend : Golang, Nest.js, REST APIs, gRPC
- Database/ORM : MySQL, PostgreSQL, MongoDB, TypeORM
- Tools : Google Lighthouse, Docker, Git, Postman, Swagger

EXPERIENCE

Junior Software Engineer

November 2025 – Present

TechnoNext Software Ltd.

Dhaka, Bangladesh

- Designed and developed scalable backend **microservices** in Go using gRPC and REST APIs, following Clean Architecture principles.
- Built and optimized APIs to support **data-heavy frontend applications**, improving response time and UI responsiveness.
- Collaborated closely with frontend team (Next.js) to deliver **end-to-end features and seamless API integration**.
- Optimized PostgreSQL queries and geospatial operations, significantly improving performance for location-based UI features.
- Implemented robust **error handling, logging, and debugging strategies** for production systems.
- Improved system reliability through efficient data handling, concurrency, and memory optimization.
- Containerized services using Docker and managed version control via Git.
- Collaborated with team to deliver end-to-end features.

Junior Software Engineer

November 2024 – October 2025

Easital Technologies Ltd.

Dhaka, Bangladesh

- Developed **scalable and responsive frontend applications** using Next.js, TypeScript, and Tailwind CSS.
- Implemented **state management (Redux Toolkit)** for complex UI flows and asynchronous data handling.
- Built dynamic and data-driven UI modules: service pages, event systems, news feeds, user profiles, cart & wishlist.
- Integrated frontend with REST APIs, ensuring **efficient data fetching and rendering performance**.
- Implemented **JWT authentication and role-based access control (RBAC)** for secure frontend-backend interaction.
- Improved UI/UX through responsive design and optimized component rendering.
- Redesigned key business pages (homepage, services, pricing), increasing usability and engagement.
- Developed backend services using Nest.js to support frontend features and API workflows.

Industrial Attachment

October 2024 - November 2024

Brain Station 23

Dhaka, Bangladesh

- Gained hands-on experience in the **Software Development Lifecycle (SDLC)**.
- Practiced Agile methodology for project management.
- Applied verification and validation processes in development.
- Worked with React.js project structure and best practices.

PROBLEM-SOLVING ACTIVITIES

- Participated ICPC Asia Dhaka Regional Site Online Preliminary Contest - 2022, 2023
- Participated UGV Programming Contest-2019 Hosted by University of Global Village
- Participated GSTU Intra University Programming Contest - 2023
- **2nd position** of GSTU Intra University Project Exhibition - 2023
- **President** at GSTU Web Development Club - 2023
- Solved **800+** problems on Codeforces ([shajib_2k19](#)), Codechef ([Md Shajib](#)), Leetcode ([Md-Shajib](#))

EDUCATION

- **B.Sc in Computer Science and Engineering** Jan 2019 – Sep 2024
Gopalganj Science and Technology University

PROJECTS:

- **MediDhaka** [[Frontend](#)][[Backend](#)][[Video](#)]: MediDhaka is a modern healthcare management web application that provides an interface for managing hospitals, doctors, and their relationships. The frontend built with Next.js, TypeScript, and Redux Toolkit, providing a responsive, interactive, and user-friendly experience and the backend with Golang (RESTful API service).
- **Career Craft** [[Github](#)] [[Live](#)]: Career Craft is a web project designed to streamline job exploration and application processes. It features an intuitive interface for users to browse job listings by category and type, submit job applications, and view detailed job information. Developed and implemented by using technologies HTML, Tailwind CSS and React.js.
- **AI Voice Agent (Appointment Setter)** [[Video](#)]: This project uses Vapi, Make, and Google Calendar to build a smart appointment system for agencies. It checks availability, books slots in real-time, and answers user questions via an AI-powered knowledge base—streamlining scheduling and enhancing support.
- **Bangla OCR Model Evaluation by ML** [[Github](#)]: OCR technology converts scanned documents into editable digital files, streamlining management and enhancing accessibility. Bengali character recognition, with 300 million speakers worldwide, finds applications in banking, healthcare, and ecommerce, digitizing handwritten records and ensuring accuracy in transactions. This technology revolutionizes information processing across diverse sectors.
- **Online Student Counselling System** [[Github](#)]: The Online Student Counseling System provides virtual support for students, offering guidance and assistance in academic, personal, and career-related matters. Through secure platforms, students can access counseling services remotely, fostering their overall well-being and academic success.
- **JobQueryAI** [[video](#)][[Github](#)]: A Flask-based Q&A app using Llama 3.2, built on scraped LinkedIn job data (Dhaka, Bangladesh) by Selenium. Users can query job-related insights powered by AI for quick, relevant answers.

PUBLICATIONS

- Published in Elsevier journal Data in Brief (2026)
- DOI: <https://doi.org/10.1016/j.dib.2026.112700>
- Designed and curated a demographically enriched handwritten Bangla dataset for early writer recognition
- Built structured dataset pipeline including data collection, preprocessing, labeling, and validation
- Organized dataset to support machine learning training, benchmarking, and pattern analysis
- Ensured data quality and consistency for research-grade usability in OCR and writer identification systems
